

MERIDIAN | Works with SONOS

PREMIUM AUDIO INTEGRATION

Seamlessly integrate Meridian's pioneering high-performance sound into your Sonos home system and rediscover your music in stunning high-fidelity.

Effortless Integration: Meridian's speaker system easily connects to your existing or new Sonos system, ensuring a smooth setup.

Uncompromising Sound Quality: Enjoy Meridian's signature audio performance while streaming your favourite playlists and podcasts.

Seamless Control: Control your Meridian speaker system directly from the intuitive Sonos app, and explore your music collection with ease.

PERFECT INTEGRATION

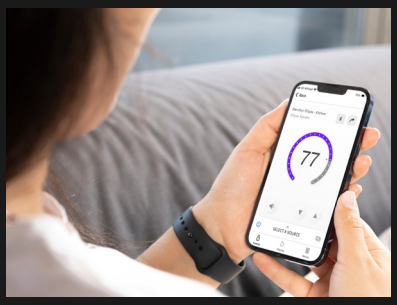

Works with Sonos enables integration between a Sonos Home Sound System and a Meridian 218 or 251 Zone Controller product. The Sonos app can be used to stream audio seamlessly to the Meridian product, while bidirectional communication between the Sonos and Meridian products allows for intuitive and flexible control options.

This means that any system based on a 251 or 218 can have the sound from the loudspeakers controlled from anywhere around the home using the Sonos interface. In addition to controlling the volume level and mute commands, the Sonos app can wake the Meridian system and automatically select the Sonos source. The Meridian system can be grouped with other Sonos devices on the network or used independently.

The two-way nature of the integration means transport commands (play, pause, next, etc.) can be sent to the Sonos player from the Meridian system. This could be done from within Roon, from the Meridian IP Control app or, in Meridian systems with IR remote control or products with front-panel keys, these too can be used to control the playback of Sonos.

EASY TO INSTALL

- Connect the digital audio output from the Sonos Port to the digital input on the Meridian 218.
- Connect the 218 to a pair of Meridian loudspeakers using SpeakerLink cables.
- Ensure the 218 and the Sonos are connected to the same network.
- Ensure all the products are powered up.
- Use the Sonos app to configure the Port audio output to passthrough.
- Use the Meridian Control app to configure the 218 for use with Sonos.
